

Have you been diagnosed with a Herniated Disc? Degenerative Disc? Bulging Disc? Sciatica?

Now in Oak Creek, Wisconsin, one doctor has what may be the most important breakthrough in non-surgical back pain treatments. Before and after MRI case studies have shown disc bulges that have reduced in size.

If you have been suffering from Back Pain or Sciatica or have been diagnosed with a herniated, degenerative or bulging disc you must hear about these new studies.

Research tells us that spinal discs are responsible for most of the spinal aches and pains people suffer from. Discs act like a cushion between our vertebrae and allow for space at each level so the nerves can exit the spinal column.

When these discs get injured or wear out from bad posture, they begin to degenerate and cause pain. Bulging and herniations begin to form, often pressing on nerves as they exit the spine. If the herniations occur at L4-L5, they can severely compromise the large sciatic nerve, causing muscle weakness, tingling, and severe pain in the buttocks or down the legs.

The most common "invasive" treatment for disc herniations is surgery.

This can cost quite a bit of money. Even with health insurance the patient is often left with large out of pocket expenses. The recovery time and missed work can range anywhere from 6 weeks to 6 months, not to mention the obvious severe risks associated with all surgery.

But here's the biggest problem... there is a high failure rate of back surgery. One medical study found that on average, 53% of L5-S1 back surgeries fail to produce relief of symptoms (International Orthop 1987.)

Before You Go Under The Knife And Opt For Spinal Surgery...

You should seriously consider a less invasive approach called spinal decompression therapy. Non-surgical spinal decompression is a new technology that creates a vacuum effect on the disc pulling the disc back into its normal position and brings in a fresh blood supply to promote the healing process.

Spinal decompression treatments are very gentle. In fact, every once and awhile I even catch a patient sleeping during sessions.

You'll simply lie on your stomach or back (whichever is comfortable) and then a special belt is gently wrapped around your waist. We'll set the machine to target your problem area – then the decompression computer system will do the rest. It is not uncommon for patients to feel better with just a few treatments, and best of all there are no dangerous drugs, no needles and NO SURGERY!

The Research Behind This Treatment

One preliminary clinical study has shown non-surgical spinal decompression to be extremely successful (good or excellent relief) in a majority of patients with herniated discs and degenerative discs – without the side effects.

Another preliminary study presented at the American Academy of Pain Management in 2007 showed...

"Patients reported a mean 88.9% improvement in back pain and better function... No patient required any invasive therapies (e.g. epidural injections, surgery)."

Feel the Improvement – and Say "Yes" to Life Again

With my "Decompression Evaluation" we'll be able find the underlying cause of your problem and then address it. Our goal is to help you become pain-free and living a normal life again. Imagine feeling tight joints free up, muscles tied in knots become more supple and strength in your muscles increasing.

Our goal is for you to be able to live life like a normal person again, without pain – able to play with your kids, enjoy time with friends, and finally get a good night's rest.

The Single Most Important Solution To Your Sciatica and Back Pain

It's time for you to find out if spinal decompression will be your sciatica and back pain solution. From now until **Friday, November 28, 2014** I'm running a very special offer where you can find out if you are a candidate for spinal decompression.

What does this offer include?

Everything I normally do in my new patient evaluation. Just call before **Friday, November 28, 2014** and here's what you'll get...

- An in-depth consultation about your health and well-being where I will listen...really listen...to the details of your case.
- A complete neuromuscular examination.
- A full set of any necessary x-rays to determine if a spinal problem is contributing to your pain or symptoms.
- A thorough analysis of your exam and x-ray findings so we can start mapping out your plan to being pain free.
- We will review our findings with you first hand and let you know if you have the potential of benefiting from this new breakthrough treatment.

Until, **Friday, November 28, 2014** you can get everything I've listed here for only **\$39**. The normal price for this type of evaluation including x-rays can range from \$110- \$310 depending on what diagnostic services are clinically necessary. With that said, you're saving a considerable amount by taking me up on this offer.

Here's what to do now:

Due to the expected demand for this treatment, I suggest calling my office immediately. The phone number is **414-761-5777**.

Call today and we can get started with your consultation, exam and x-rays as soon as there's an opening in the schedule. My office is called Oak Creek Relief & Wellness and you can find us at 1900 W. Ryan Rd, right at the off-ramp of I-94 and Ryan.. Tell the receptionist you'd like to come in for the Dr. Ken Krimpelbein Decompression Evaluation before **Friday, November 28, 2014** Yours in Health & Wellness,

Dr. Ken Krimpelbein D.C.

Phone 414-761-5777
